Polarization Maintaining DWDM

Polarization Maintaining Dense Wavelength Division Multiplexer (PMDWDM) follows ITU standard and Telcordial standard. It uses thin film filter (TFF) technology to provide wide passband, low insertion loss and high channel isolation with high polarization extinction ratio. Furthermore, this device can preserve the polarization of optical signals. It can act as add-drop multiplexer in the optical communication system.

Applications	Features
● Add/Drop Function	● Low Insertion Loss
● DWDM Systems	● Wide Passband
● Fiber Optic Sensors	● Preserve Polarization Optical Signal
	● Excellent Environmental Stability
	● High Wavelength Isolation with High Extinction Ratio
